ENTIRE TEC

Transform your enterprise network into an ever-reliable, powerful and highly secure engine.

IP-based networks are the lifeline of every company and essential for competitive business activities. ENTIRETEC Global Network Services offer high-performant and secure network solutions as well as 24x7 operations - scalable and optimally tailored to the specific requirements of your company.

Every day, new network-based applications conquer our daily business lives – the resulting, constantly growing complexity of the IT infrastructure requires a stable and future-oriented foundation. ENTIRETEC Global Network Services cover a wide range of manufacturer independent network technologies and enable an efficient collaboration of all company units.

CONSULTING & DESIGN

Whether you want to build, expand, optimize or secure your corporate network, we advise you on the optimal solutions to achieve your goals. Matching your business model and existing infrastructure, we develop customized solutions that not only take your requirements into account, but also consider industry-specific guidelines and future-oriented considerations.

Managed LAN/ WLAN
Providing, operating and securing a high-performance LAN/WLAN network as the indispensable backbone of your corporate communications.

Managed WAN/ SD-WAN
Build, manage, and optimize a wide area network (WAN) including software-defined approaches to securely and efficiently connect all company sites.

Remote Access
Provision of secure, high-performance remote access to the corporate network, e.g. for employees at mobile workstations or for service providers.

Network Access Control (NAC)
Ensuring that no foreign devices connect to your network and thus improving the security level of your corporate network.

TRANSITION & TRANSFORMATION

Together with you, we accompany your company through all phases of IT transformation. Based on the developed design, the global rollout takes place. Our experienced experts identify potential challenges in advance and ensure a smooth migration with a detailed step-by-step plan.

24x7 MONITORING & OPERATIONS

Protecting and operating your network should not keep you or your IT teams awake at night. Our specialists in the Network Operations Center (NOC) proactively monitor and operate your IT infrastructures around the clock according to ITIL standards and tailored SLAs freeing up your IT teams to focus on business-oriented initiatives. In addition, a dedicated service manager is available to each customer as a single point of contact.

ENTIRE TEC

ONE PLATFORM FOR ALL SERVICES

Technological centerpiece is the ENTIRETEC Service Platform developed by us. It not only guarantees the worldwide availability of solutions and services, but also harmonizes all service-relevant tools and necessary processes across manufacturers for a uniform service operation according to ITIL standards with automated processes.

A core function is asset management, in which all information about your network components is stored. All assets are monitored via integrated monitoring, regardless of manufacturer and function. In our ticket system, we document asset-related adjustments, extensions and troubleshooting.

YOUR NETWORK AT YOUR FINGERTIPS

All assets and important parameters of your network as well as the key data of your managed services are consolidated, analyzed and graphically presented for you in the ENTIRETEC Service Portal. This provides you with vendor-independent, meaningful insights into your global network and all service-relevant information - at any location, on any device, in real time.

YOUR ADVANTAGES OF GLOBAL NETWORK SERVICES

- Customer-specific 24x7 managed services according to ITIL standards and tailored SLAs
- Complete service transparency and asset management in the web-based Service Portal
- Reduced operational support costs and flexible cost model
- 24x7 access to expert know-how and resources, thereby reducing the workload of your own IT
- High network security through modern network technologies & encryption methods
- Integration of additional security services for comprehensive protection of corporate assets

- Service Platform for global availability and uniform service operations
- High performance and availability of the networks due to continuous monitoring
- Frequent maintenance as well as firmware & software updates of all component
- Minimizing technical risks and maximum availability through redundancy
- Uniform network and security standards at all company locations
- Efficient and secure integration of remote workstations

ENTIRETEC is a global managed services provider and specialist for network and security technologies. Across industries, we support our customers' global business strategies with highly available and secure IT solutions and combine them in a tailored manner to provide future-proof answers for digitalization, mobility, cloud and IoT.
