

Maximum protection with Managed Security Services: Keep your business and users secured from cyber-attacks.

IT/ OT security is one of the most important topics for companies today. Attack methods and threats from cyber criminals are becoming increasingly complex and more elusive. With our Managed Security Services, you increase your network security, minimize risks and ensure holistic protection of your company assets.

In today's digital landscape, the importance of IT/OT security for businesses cannot be underestimated. Cyber criminals are becoming more sophisticated and finding new ways to attack businesses and compromise sensitive data. Protecting your networks and systems from hacker attacks, malware or data espionage is paramount to maintaining the trust of your customers and partners and ensuring business continuity.

At ENTIRETEC, we understand the diverse security challenges your business faces. Our experts are here to help you strengthen your infrastructures and build an active line of defense against potential threats.

ENTIRETEC Managed Security Services offer a reliable and cost-effective alternative to the costly in-house operation of IT/OT security and network solutions. Our specialists take over the configuration and 24x7 operations of your security systems, protect you against cyber attacks and advise you independently of manufacturers on the further development of your security strategy.

With our modular approach, we tailor our Managed Security Services to the specific needs of your business. Unburden your resources and rely on ENTIRETEC's expertise for a robust and customized security solution.

Next Generation Firewall

Combination of classic firewall functionalities with application-specific protection measures.

Internet Access Security

Secure Internet access, malware blocking, and enforcement of your security policies across all sites.

Network Access Control

Security and transparency in the LAN/ WLAN and protection of your network against intruders without hindering authorized users.

DNS Security

Proactive protection against cyber attacks, malware or data exfiltration and prevention of complex DNS-based attacks.

OT Security

Implementation of modern security concepts when networking OT environments to prevent espionage or sabotage.

Email Security

Advanced, multi-layered protection against the entire spectrum of email-borne threats.

24x7 SECURITY OPERATIONS

Our job is to secure your network against unauthorized intrusions. All managed services in our security portfolio are integrated to provide you with comprehensive protection for your company. We monitor your systems around the clock, identify and analyze unusual behavior of IT/ OT components and block potential attackers.

The localization of potential vulnerabilities and rapid problem resolution are a matter of course. Close cooperation with your IT ensures that relevant information is seamlessly passed on to your security team.

CONSULTING & WEITERENTWICKLUNG

Comprehensive IT/ OT basic protection is a key factor for long-term business success. As vendor-independent experts, we advise you on how to optimally protect your company against cyber attacks.

Together, we analyze and evaluate the threat situation, implement optimizations and precisely adapt your security concept to your business requirements. Based on cost-benefit considerations and our years of experience in service operations, we develop customized plans for implementation.

VISIBILITY AT ALL LEVELS

All assets and important parameters of your network as well as the key figures of your Managed Security Services are consolidated, analyzed and graphically displayed for you at the ENTIRETEC Service Portal. This provides you with vendor-independent, actionable insights about your global network and all service-relevant information – anywhere, on any device, in real time.

YOUR BENEFITS FROM MANAGED SECURITY SERVICES

- ✔ 24x7 security monitoring of your IT / OT environments for rapid detection, analysis and response to potential threats
